

The code snippet I added to exclude my products from my shop page which works but also hides it from everywhere

```
/**
 * Exclude products from a particular category on the shop page
 */
function custom_pre_get_posts_query( $q ) {

    $tax_query = (array) $q->get( 'tax_query' );

    $tax_query[] = array(
        'taxonomy' => 'product_cat',
        'field' => 'slug',
        'terms' => array( 'amorganic' ), // Don't display products in the amorganic category on the
shop page.
        'operator' => 'NOT IN'
    );

    $q->set( 'tax_query', $tax_query );

}
add_action( 'woocommerce_product_query', 'custom_pre_get_posts_query' );
```

This is my theme shop page

This is my custom built one in elementor
